

World Sustainable Built Environment Conference 2017 Hong Kong
Transforming Our Built Environment through Innovation and Integration:
Putting Ideas into Action
5-7 June 2017

Special Session

Natural Resources and Sustainability

ZIEGERT | ROSWAG | SEILER ARCHITEKTEN INGENIEURE

Creating natural change - researching, designing, building with earth, wood, bamboo

Artis GmbH Workshop, Berlin

Torfbremise, Schechen

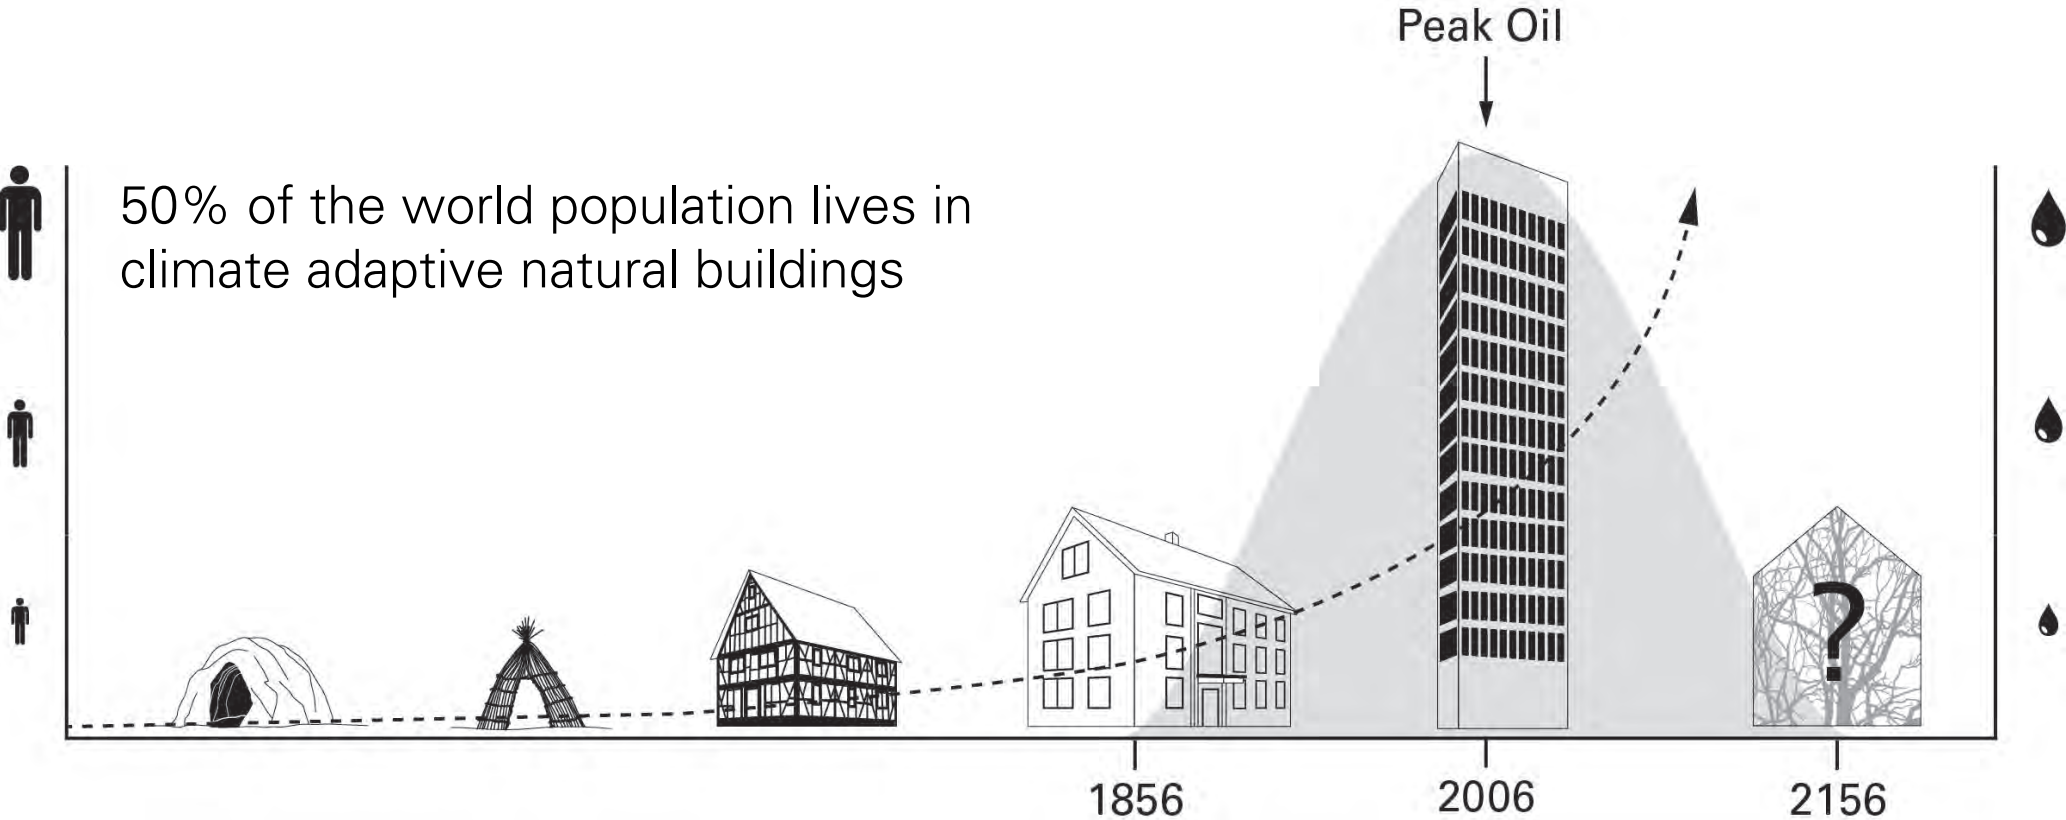

School handmade, Bangladesh

ZRS office and lab, Berlin

EVOLUTION OF THE ARCHITECTURE

What will happen after the peak oil?

REFERENCE FOR OUR BUILDING SYSTEM

Traditional "Fachwerkbau" out of wood earth and straw

TIMBER - EARTH BUILDING SYSTEM

Energy efficient without mech. ventilation

- 01 Building Ground
- 02 Concrete Floor Slab
- 03 Timber Construction, Wood Fibre Insulation
- 04 Timber Construction, Wood Fibre Insulation
- 05 Wood Fibre Insulation, Floor Heating
- 06 Timber - Earth Walls
- 07 Solid Timber Ceiling
- 08 Earth Cladding to condition room climate
- 09 Passive Sun Use
- 10 Floor Heating
- 11 Solar Hot Water Collector
- 12 Hot Water Storage, Additional Gas Heating
- 13 Passive Fireplace (Heat Exchanger)

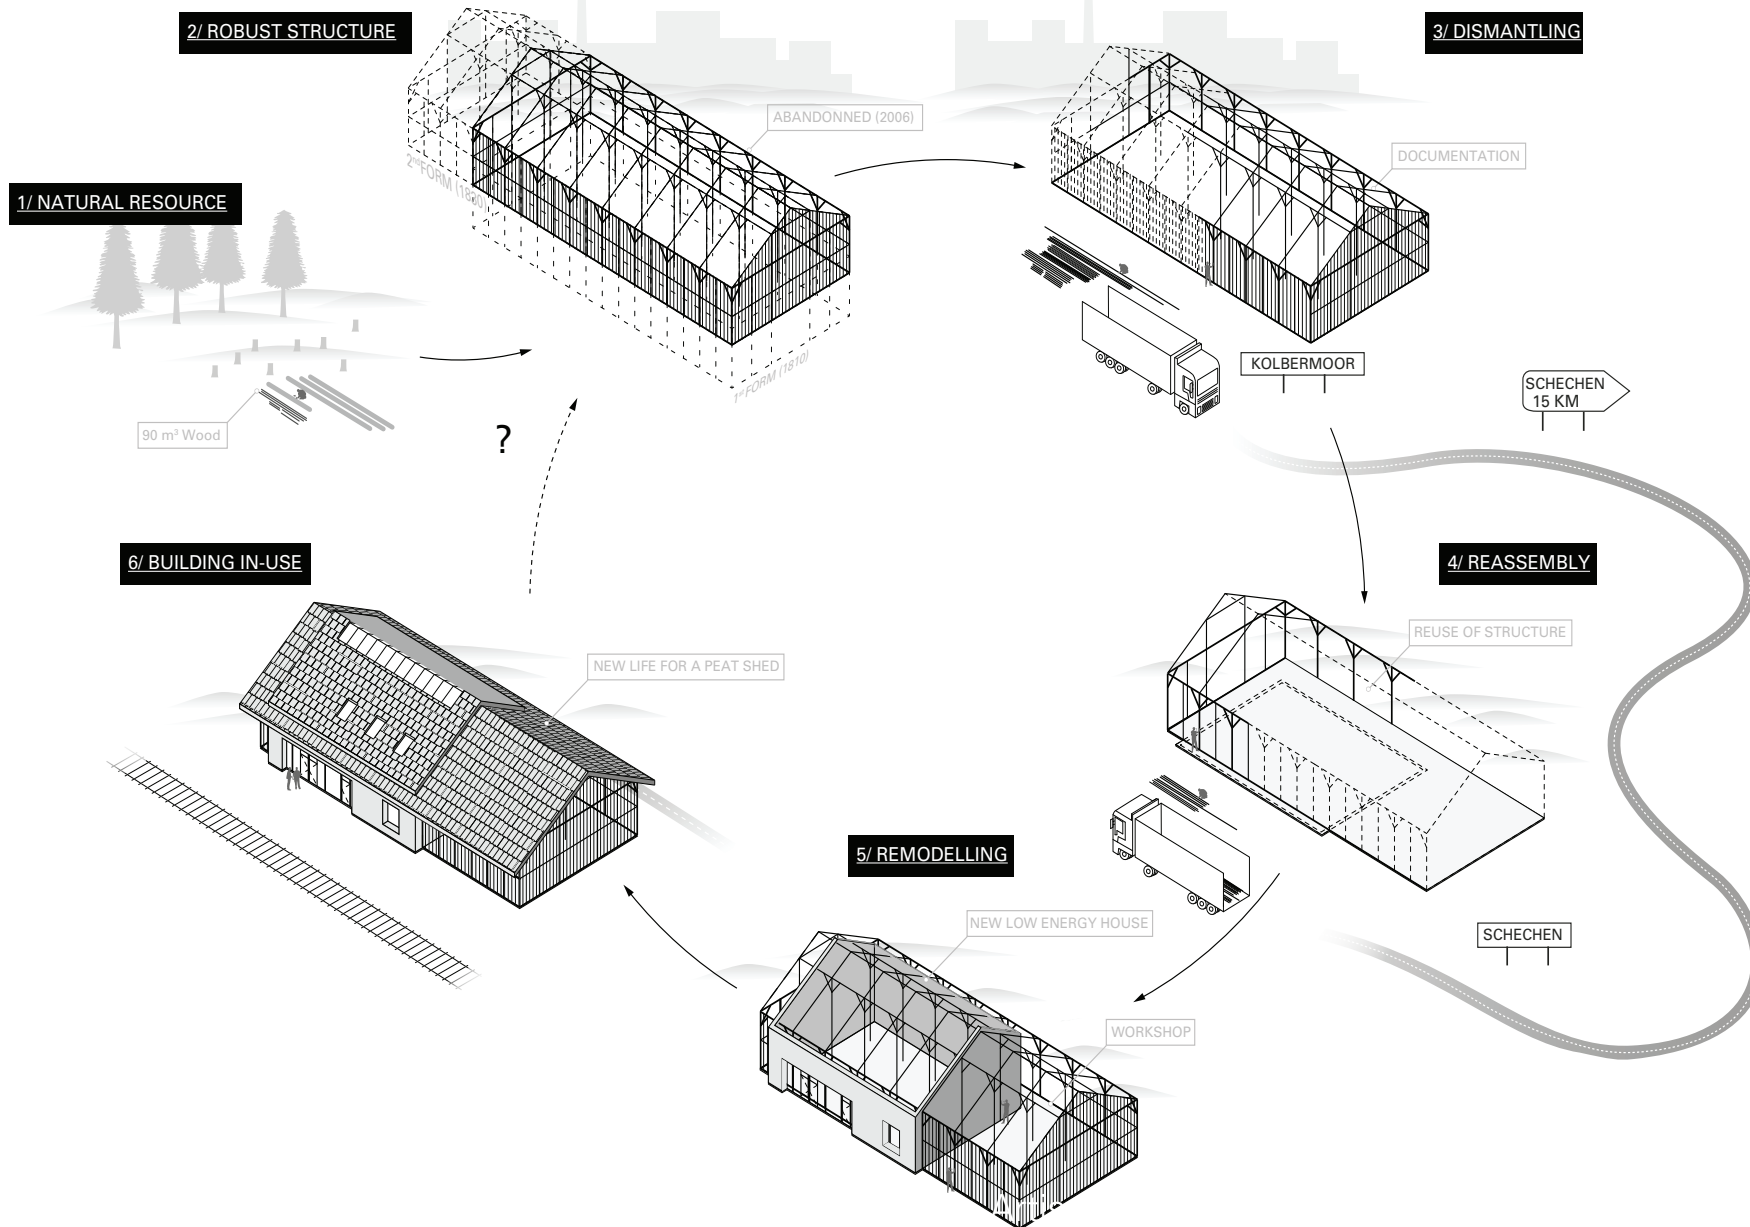

LOW ENERGY HOUSE, REICHENOW, GERMANY

Wood as a load bearing construction, earth Blocks, earth plaster

TORFREMISE (PEAT SHED), SCHECHEN, GERMANY

4th life for a 18th century construction - intagration of a basket weavers workshop + home

TORFREMISE (PEAT SHED), SCHECHEN, GERMANY

Translocation, new foundation slab, integration of a natural low-energy construction

1 Existing situation before dismantling

- 1.1 Foundation
- 1.2 Historic timber structure

2 Re-erection at new location

- 2.1 New foundation and floor slab (reinforced concrete)
- 2.2 New landscape level
- 2.3 Re-erection of historic timber structure

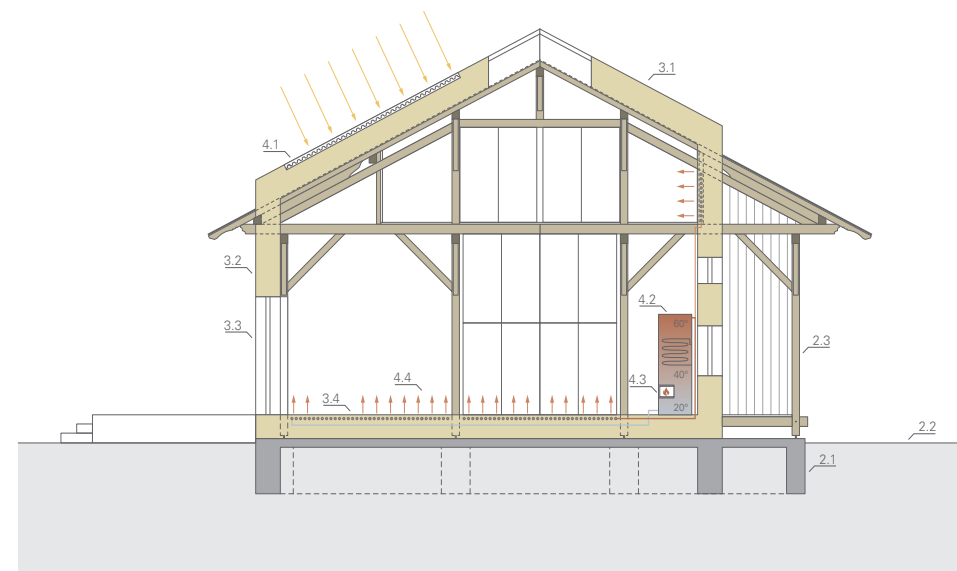

3 Integration low-energy house

Highly-insulated vapour permeable building shell from sustainable raw materials (timber, wood fibre insulation, earth)

- 3.1 Doubled roof structure, U-value: $0,15 \text{ W/m}^2\text{K}$
- 3.2 Exterior wall, U-value: $0,13 \text{ W/m}^2\text{K}$
- 3.3 Wooden window triple glazing, U-value: $1,0 \text{ W/m}^2\text{K}$
- 3.4 Floor build-up insulated, U-value: $0,1 \text{ W/m}^2\text{K}$

4 Regenerative heat generation

- 4.1 Hot water collector
- 4.2 Stratified storage tanks
- 4.3 Wood boiler
- 4.4 Surface heating for heat distribution

TORFREMISE (PEAT SHED), SCHECHEN, GERMANY

High insulated structure out of timber, woodfibre and earth

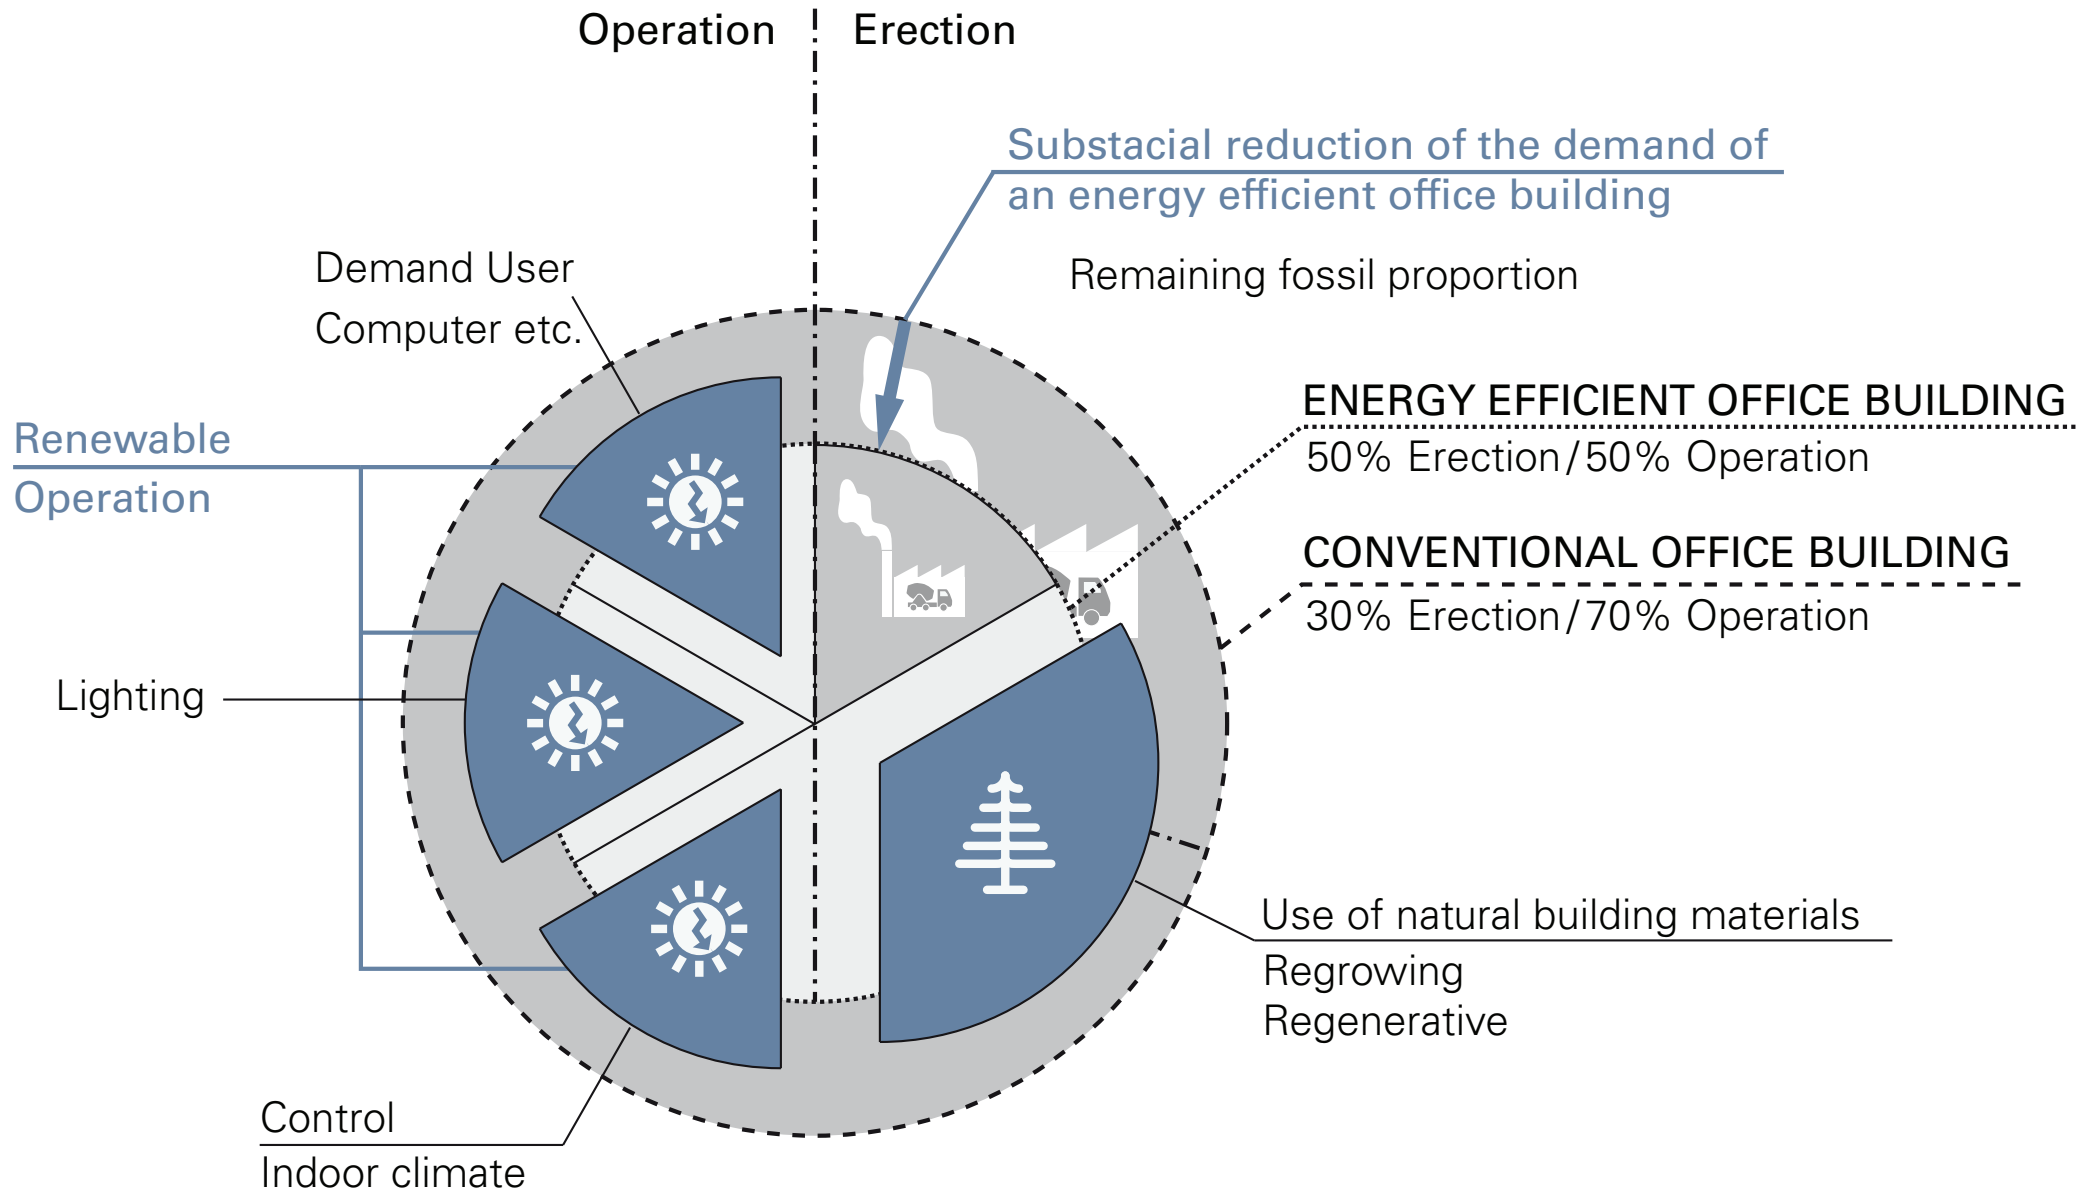

Wohnen und Arbeiten in der Torfremise, Innenraum Obergeschoss, weißer Lehmfeinputz

LIFE CYCLE ASSESSEMENT OF OFFICIS BUILDINGS

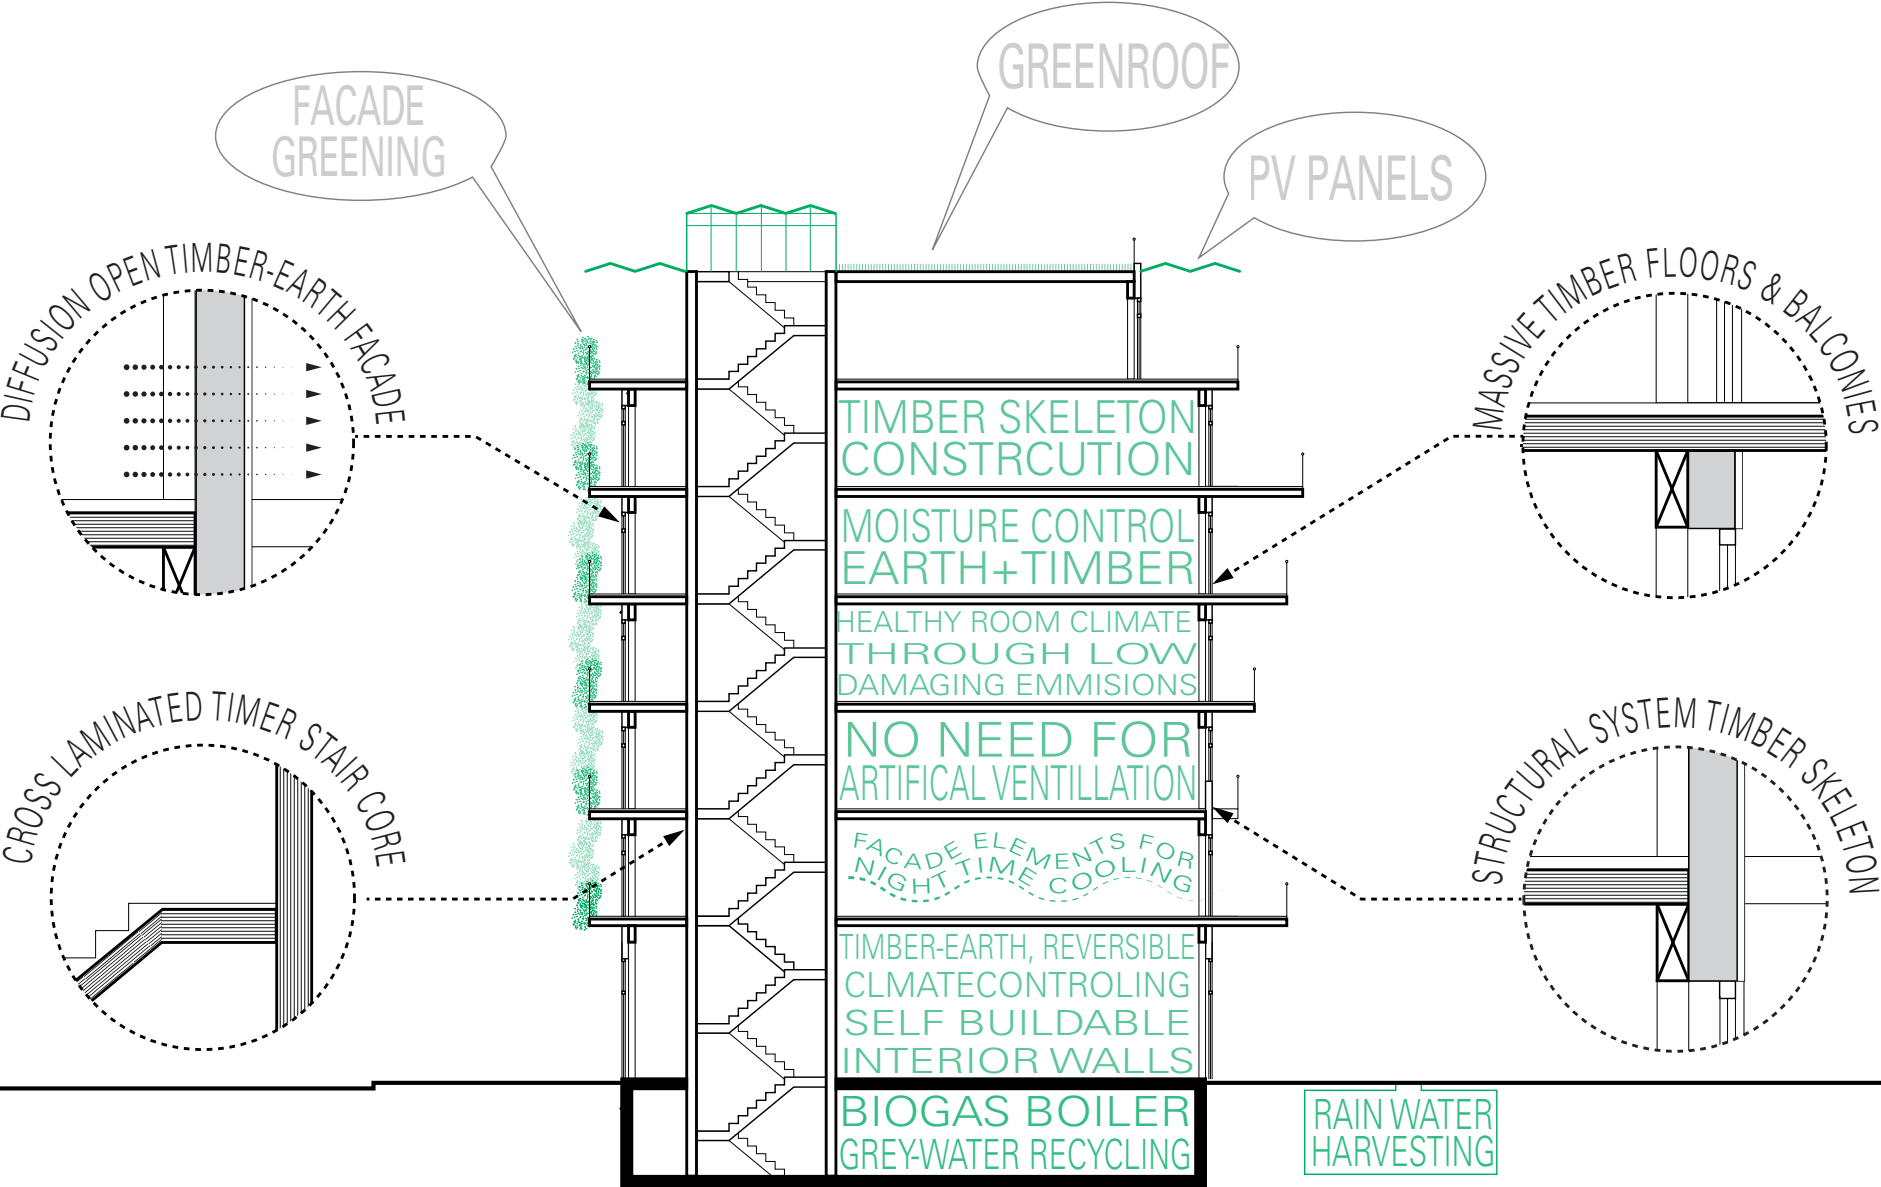

Natural building:

Mayor reduction in construction, 0% fosil services of the building (Plus Energy)

LOWTECH HOUSING - 7 STOREYS VISIBLE TIMBER CONSTRUCTION

Climate active surfaces, reduction of mechanical ventilation (optional zero)

ZERO CARBON BUILDING: ARTIS GMBH WORKSHOP, BERLIN

Energy efficient, clean production inside the urban context

3.1 PV-Dünnschichtmodule, Ost-West-Orientierung, Leistung ca. 30kW

3.2 Nutzung von Prozesswärme der Produktion

3.3 Zerkleinerung von Holzabschnitten aus der Produktion

3.4 Hackschnitzelbunker zur Speicherung von Brennstoff im Sommer, Volumen ca. 80m³

3.5 Beheizung zu 100% CO₂-neutral über Hackschnitzelheizkessel, automatische Beschickung

3.6 Wärmeverteilung über Betonkernaktivierung (EG) und Fußbodenheizung (OG)

3.7 Lüftung innenliegender Räume über Lüftungsgerät mit Rotationswärmetauscher

3.8 Spezial-Lüftungsanlage für Lackiererraum, WRG über Plattenwärmetauscher,

Nachterhitzung über Heizkessel

FLEXIM

FLEXIM

FLEXIM HEADQUARTERS, BERLIN

FLEXIM HEADQUARTERS, BERLIN

Natural build and ventilated production building in low-energy standard

1 Baugrund

- 1.1 Aufschüttung nicht tragfähig ca. 2,0 m
- 1.2 Gewachsener Baugrund

2 Gebäudehülle diffusionsoffen, feuchte- und temperatursteuernd

- 2.1 Gründung/UG als weiße Wanne; U-Wert ca. 0,15 W/m²k
- 2.2 Außenwände, Holzbau hochdämmend; U-Wert ca. 0,12 W/m²k
- 2.3 Gründach für sommerlichen Wärmeschutz, Holzbau hochdämmend; U-Wert ca. 0,12 W/m²k
- 2.4 Rohbau, hybrid, Holz-Beton-Verbunddecke
- 2.5 Fenster-Fassadenelemente; U-Wert ca. 1,0 W/m²k

3 Klimasteuerung passiv

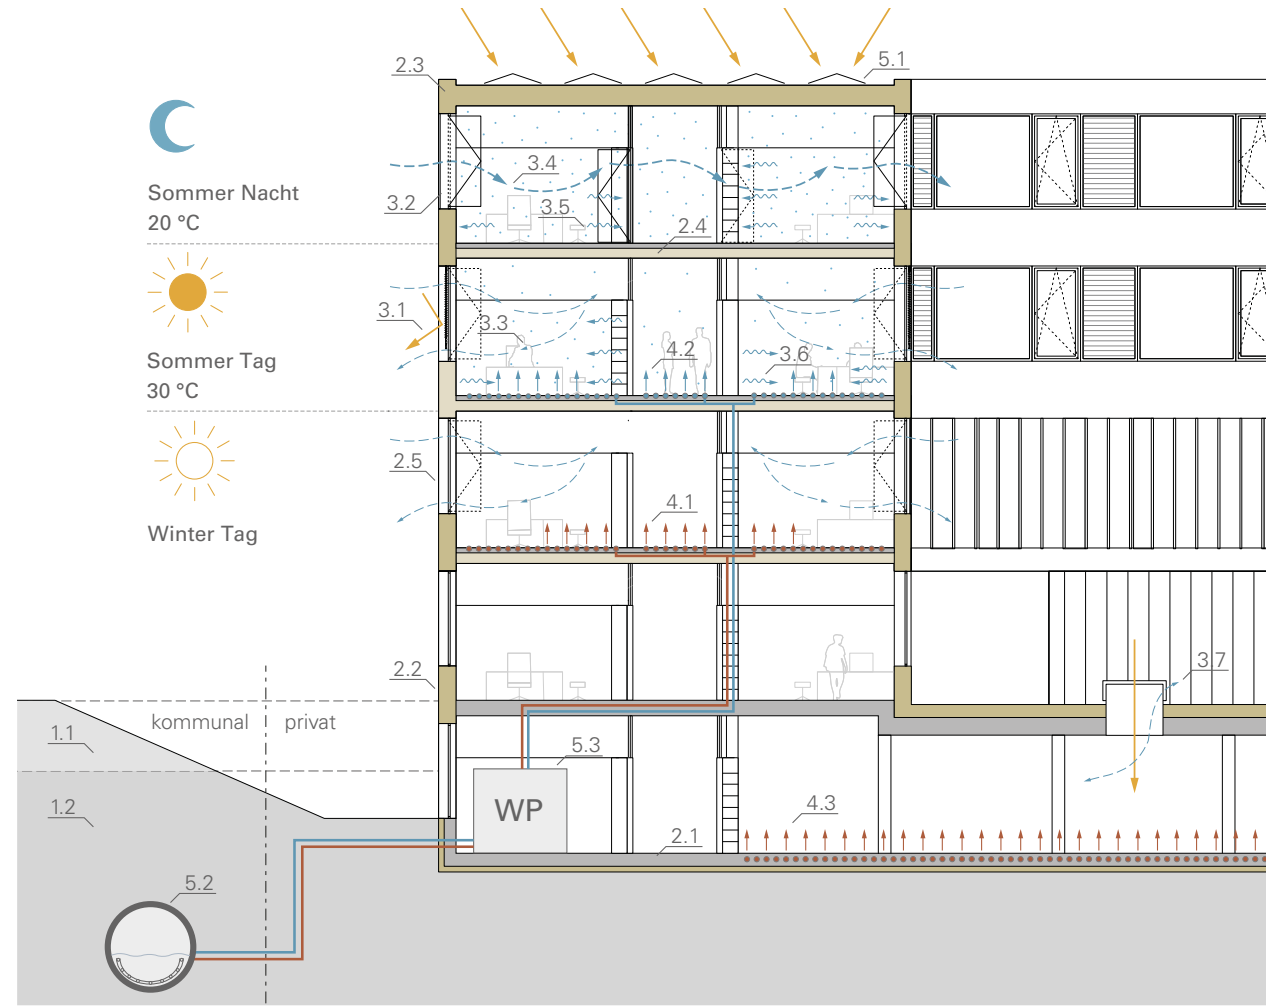

- 3.1 Sonnenschutz außenliegend, beweglich
- 3.2 Lüftungsflügel zur Nachtauskühlung, wettergeschützt
- 3.3 Lichtband, Querlüftungsöffnungen
- 3.4 Nachtauskühlung, Feuchteaufnahme (Holz und Lehm)
- 3.5 Feuchteabgabe, Verdunstungskühlung
- 3.6 Öffnenbares Oberlicht

4 Klimasteuerung aktiv

- 4.1 Heizung an kalten Wintertagen
- 4.2 Optional Kühlung, heißer Sommertag
- 4.3 Industrieflächenheizung, Bauteilaktivierung

5 Energiequellen

- 5.1 PV-Anlage, Energiequelle elektrisch, Verschattung der Dachfläche
- 5.2 Wärmerückgewinnung aus Abwasser, kommunale Vernetzung
- 5.3 Wärmepumpe (deckt ca. 80% des Wärmebedarfs)

FLEXIM HEADQUARTERS, BERLIN

Concrete Timber Hybrid Construction, Multi- Funktional Working Space

FLEXIM HEADQUARTERS, BERLIN

Energy concept: Heat recovery from public waste water, heat pump

Visualisierung Fa. Huber

EXTENSION UMWELTBUNDESAMT, DESSAU (Competition)

Office extension to the existing building

EXTENSION UMWELTBUNDESAMT, DESSAU (Competition)

Day- and artificial light control through the inhabitant

EXTENSION UMWELTBUNDESAMT, DESSAU (Competition)

High summer and winter comfort without air condition, natural ventilation

Sommernacht

- Natürliche Nachtauskühlung über Querlüftung
- „Aufladen“ der Lehmbauteile mit kühler Nachtfeuchte
- Verdunstung/Kühlung am Tag bei steigenden Temperaturen

Wintertag

- Dezentrale Lüftungsgeräte mit Wärmerückgewinnung mit CO₂-Steuerung
- Pendelbetrieb im ca. 90 Sekunden Takt

EXTENSION UMWELTBUNDESAMT, DESSAU (Competition)

Natural construction: Wood, cellulose, rammed earth, compressed gravel foundation

Nordfassade 1:50

Südfassade 1:50

EXTENSION UMWELTBUNDESAMT, DESSAU (Competition)

Limited glassed elements, PV panels for shading in the south

Ansicht Ost 1:200

Ansicht Nord 1:200

DIENACHWACHSENDESTADT

Network to research on and build a resource positive city model
